

UI Tweaks

Remove dates on specials

Currently there are beginning and ending dates/times that have to be set when entering a new special. Those aren't needed - let's remove that feature/logic.

Where the app loads on the screen (mobile)

When you first login/access the app, the page loads at the top of the first venue. You have to scroll up to see the top of the page. I'm not sure if that's an anchor issue or what, but the screen needs to load at the top. This doesn't happen on the desktop version.

Back button on specials page

Depending on what image the bar has, it can be hard to see the "back to venues" button. Let's make that more obvious (don't add any green please).

Sign up / Sign in

This is really a two-part issue. The first is to adjust the verbiage on the website from "Join Waitlist" to sign up/in. But that brings up the second component, which is how we're currently handling access to the app. Right now sign up and sign in are the exact same thing. That's going to be confusing to some users. It's also not great from a UI or data standpoint. This we'll need to discuss more.

Data Issues

Redemptions

We seem to have an issue with the redemptions button. When I tested last night I got an error message that said "This venue is not ready yet." It also said "We are missing location coordinates for..." The location I tested was Parlor and Yard. I double checked and the address had been entered in the admin panel, so that's not the issue.

Note: I was not in Austin when I tested this. That could have something to do with it.

User info capture

I assume that the redemptions are being captured correctly (haven't been able to test that yet). But are we collecting new sign ups? I don't believe we are. We need a way to store all of the emails and zip codes somewhere.
